library was constructed in the Express 1 plasmid vector by Open Biosystems. First strand cDNA synthesis was primed with an 54 bpl linker primer contraining an oligodT sequence preceded by a synthetic NoLI site (first strand primer: 5 '-CACTAGTTCTAGATCGCGAGCGCGCCC(T)25-3'). Following second strand synthesis, cDNAs were made blunt at the end corresponding to the original 5 prime end of mRNA, and cloned directionally into the NoII and ECORV sites of Express 1. Note that the ECORV site is typically destroyed in the blunt end cloning, leaving a junction of the form 'xxxATC' (where is ATC is the second half of the ECORV site, and xxx is derived from the CDNA sequence). A map of the Express 1 vector is available at:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          684 bp DNA linear GSS 11-MAY-2005

Naming Conventions: EST name is generated by the concatenation of
the UGI Clone Inl.gov
Indicates a reverse sequencing read of the insert. It does not
indicates a reverse sequencing read of the insert.
It does not
necessarily reflect the orientation of the insert.
Poly-A: Based upon the presence of a run of 14 or more T residues
at the beginning of the sequence, this clone was polyadenylated.
The resulting Poly-T sequence has been removed.
Small insert: Based upon one or more sequencing reads of this clone
where vector sequence was present at both ends, this clone has been
determined to contain a cDNA insert on the order of 600-1000 bases.

//organ: laef; Vector: pBCSK(-); Site 1: HincII; DNA prepared from purified nuclei was randomly sheared, end-repaired, size fractionated to enrich for the 0.5 to 5 to fraction, ligated into HincII-digested pBCSK(-) vector and electroporated into E. coli cells. This is a standard (unfiltered) whole genome shotgun library."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CZ331571 522 bp DNA linear GSS 24-MAR-2005

Clones are derived from the bovine BAC library CHORI-240
(http://www.chori.org/Dacpac/bovine240.htm). For BAC library
availability, please contact Pieter de Jong (pdejong@mail.cho.org).
Clones may be purchased from BACPAC Resources
(http://www.chori.org/Dacpac/ordering_information.htm). This work
was undertaken as part of the International Bovine BAC Mapping
Consortium (IBBMC) by CSIRO Livestock Industries, Australia and the
British Columbia Genome Sciences Centre, Canada.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /Bab.maie...
/lab hose="E. Coli strain XL10-Gold, T1-resistant, P-"
/clone_lib="Wouse 10kb plasmid UUGCIM library"
/clone_weetor: PWD42nv; Purified genomic DNA from M.
musculus C57BL/6J (male) was obtained from the Jackson
Laboratory Mouse DNA Resources/documents/dnares/). The DNA
was bylordynamically sheared by repeated passage through a
0.005 inch orifica at constant velocity. The sheared DNA
was blunt end repaired with T4 DNA polymerase and T4
polynucleotide kinase. Adaptor oligonucleotides were
ligated to the blunt ends in high molar excess. The
adaptored DNA was purified and size-selected for a 9.5 to
10.5 kb range using preparative agarose gel
electrophoresis vector DNA was prepared from a derivative
of pWD42 (gi|4732114|gb|AR129072.1), a copy-number
inducible derivative of plasmid R1. The vector was ligated
with adaptors complementary to the insert adaptors and
purified. The sheared, adaptored mouse DNA was annealed to
adaptored vector DNA, and transformed into
chemically-competent E. coli XII0-Gold (Stratagene) cells
and selected for ampicillin resistance."

/note="Vector: pBeloBAC11; Site 1: Hin dIII; Constructed for Uppsala University by Marie-Christine Le Paslier in the laboratory of Denis Le Paslier at the Centre d'Etude du Polymorphisme Humain (CEPH), Paris, France. Briefly, Trypanosoma cruzi (L. Brener agarose embedded DNA (obtained from Dr. Franco da Silveira) was partially digested with Hin dIII. High molecular weight fragments were ligated in pBeloBAC11 digested with Hin dIII. The average insert size is 100 kb. Total clone coverage: approx. 33 X the haploid genome."

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Description

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RESULT 6

US-09-322-409-84/C

US-09-322-409-84/C

Sequence 84, Application US/09322409

Patent No. 6471957

Patent No. 6471957

APPLICANT: Sim, Gek-Kee

APPLICANT: Yang, Shumin

APPLICANT: Wonderling, Ramani S.

TITLE OF INVENTION: CANINE AND FELINE IMMUNOREGULATORY PROTEINS, NUCLEIC

TITLE OF INVENTION: CANINE AND PELINE IMMUNOREGULATORY PROTEINS, NUCLEIC

TITLE OF INVENTION: CANINE AND USES THEREOF

FILE REFERENCE: IM-2-C1

CURRENT APPLICATION NUMBER: US/09/322,409

CURRENT PILING DATE: 1999-05-29

EARLIER PILING DATE: 1999-05-29

RARLIER PILING DATE: 1999-05-29

BARLIER PILING DATE: 1998-05-29

BEQUIN NO 84: 154

SOFTWARE: Patentin Ver. 2.0

Sequence 84, Application US/09451527

Sequence 84, Application US/09451527

Patent No. 6482403

GENERAL INFORMATION:
APPLICANT: Sim, Gek-Kee

APPLICANT: Yang, Shumin

APPLICANT: Preitz, Matthew J.
APPLICANT: Wonderling, Ramanis.
TITLE OF INVENTION: CANINE AND FELINE IMMUNOREGULATORY PROTEINS, NUCLEIC
TITLE OF INVENTION: ALTO MOLECULES, AND USES THEREOF
FILE REFERENCE: 1999-12-01
CURRENT PILING DATE: 1999-12-01

EARLIER APPLICATION NUMBER: 05/322,409

EARLIER PPLICATION NUMBER: 60/087,306

EARLIER PPLICATION NUMBER: 60/087,306

Patent No. 6747137

BARERAL INFORMATION:
ARBERAL INFORMATION:
ARBICANT: Keith Weinstock et al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICAN
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196.132
CURRENT APPLICATION NUMBER: US/09/248,796A

CURRENT FILING DATE: 1999-02-12
PRIOR APPLICATION NUMBER: US 60/074,725
PRIOR FILING DATE: 1998-02-13
PRIOR FILING DATE: 1998-02-13
PRIOR APPLICATION NUMBER: US 60/074,725

Sequence 82, Application US/09451527

Patent No. 6482403

GENERAL INFORMATION:

APPLICANT: Sim, Gek-Kee

APPLICANT: Dreitz, Matthew J.

APPLICANT: Dreitz, Matthew J.

APPLICANT: Monderling, Ramani S.

ITILE OF INVENTION: CANINE AND FELINE IMMUNOREGULATORY PROTEINS, NUCLEIC

ITILE OF INVENTION: CANINE AND USES THEREOF

FILE REFERENCE: IM-2-C2

CURRENT APPLICATION NUMBER: US/09/451,527

CURRENT PAPLICATION NUMBER: US/09/451,527

CURRENT PAPLICATION NUMBER: 09/322,409
